Jr.,
"Bacillus thuringiensis cryet4 and cryet5 toxin genes and proteins
toxic to lepidopteran insects".

Patent number US5322687, 21-JUN-1994.

-!- PUNCTION: PROWOTES COLLOIDOSMOTIC LYSIS BY BINDING TO THE MIDGUT
BETTHELIAL CELLES OF MANY LEPIDOPTERAN LARVAE.

-!- DEVELOPMENTAL STRAGE: The crystal protein is produced during
sporulation and is accumulated both as an inclusion and as part o

"Coleopteran-active Bacillus thuringiensis isolates and genes encodir coleopteran-active toxins.";
Patent number US5286486, 15-FEB-1994.
-!- FUNCTION: PROMOTES COLLOIDOSMOTIC LYSIS BY BINDING TO THE MIDGUT BENTHELIAL CELLS OF COLLOIDOSMOTIC LYSIS BY BINDING TO THE MIDGUT.
-!- DEVELOPMENTAL STAGE: The crystal protein is produced during sporulation and is accumulated both as an inclusion and as part of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the spore coat.
MISCELLANEOUS: Toxic segment of the protein is located in the N-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       --

A protein having insecticidal activity, a DNA encoding said protein, and an agent and a method for preventing harmful organisms.

Claim 1; Page 9-12; 19pp; Japanese.

This invention relates to a crystalline protein comprising a fully defined sequence and the mucleotide sequence encoding this protein. The protein of the invention is an agent for preventing barmful organisms comprising Bacillus thuringlensis serovar galleriae SDS502, its mutant or a microbe transformed by a DNA encoding the protein. This microbe can be used to produce a protein containing the protein, or containing a protein having insecticidal activity produced by the SDS502, its mutant or a transformed microbe, a microbe which is transformed by using the above or a seed transformed by using the above DNA, and producing a protein or a seed transformed by using the above DNA, and Bacillus thuringiensis serovar galleriae SDS502 producing a protein comprising and producing a protein showing insecticidal activity. The protein of the invention may have insecticidal activity. The agent is used for preventing Coleoptera larvee. This sequence represents the Bacillus thuringiensis insecticide protein of the invention

The toxin is a deltar-endotoxin active against acarid pests, including the Two Spotted Spider mite. The isolates can be used against non-phytophagus mites such as acarid pests of livestock, fowl and stored prods. The genes can be cloned and used to transform other hosts, which can be used to control mites, or in the case of transgenic plants, be resistent to mites. The sequence given is an approx. 130 kD protien known as Bacillus thuringiensis PS50C (B.t.PS50C). This novel delta-endotoxin has been shown to be active against the Colorado potato beetle (Leptinotarsa decemlineata). The gene encoding this toxin can be transformed into suitable hosts such as Pseudomonas, which can then be applied to the environment of coleopteran insects where they will proliferate and be ingested by the insects. This DNA sequence can be inserted into an expression vector which contains a promoter/operator region, a ribosome binding site, polyadenylation signals, etc. This will allow transcription and translation of the cells in the appropriate host. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             181 AKTPSFAISGOEVPLISVYAQAANIHILLIRDASIFGAEWGFTPGBISTFYDRQVTRTAQ 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                478
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300
The sequences given in AAR33768-70 represent lepidopteran-active toxins. The DNA encoding these sequences were used within a Ti or Ri plasmid, to transform plant cells. Whole plants can then be regenerated from the transformed cells. The toxin may also be produced by cloning Bacillus thuringiensis (Bt) . It may then be applied directly to the plant locus. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to correct PN field.)
